Amendment C

**Amendments to the Claims:**

The listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claim 1 (currently amended): A method performed within a router for distributing routing information within the router, the method comprising:

receiving a set of addresses from a client indicating route updates of interest to the client and a set of types of routing changes that are of interest;

maintaining one or more data structures including information corresponding to the set of addresses and the set of types of routing changes that are of interest;

receiving a particular route update; and

notifying the client of the particular route update in response to identifying the particular route update corresponds to both at least one address in the set of addresses and at least one routing attribute in the set of types of routing changes that are of interest;

wherein ~~the router includes~~ the client is within the router.

Claim 2 (original): The method of claim 1, wherein said at least one routing attribute includes a change in an interface for reaching an address in the set of addresses.

Claim 3 (original): The method of claim 2, wherein said notifying the client of the particular route update includes notifying the client of the address.

Claim 4 (original): The method of claim 1, wherein said at least one routing attribute includes a change in a path from the router to an address in the set of addresses.

Claim 5 (original): The method of claim 4, wherein the address is directly reachable from the router.

In re LIN ET AL., Application No. 10/733,016  
Amendment C

Claim 6 (original): The method of claim 1, wherein said at least one routing attribute includes a change in whether an address in the set of addresses is directly reachable or is not directly reachable.

Claim 7 (original): The method of claim 1, wherein said at least one routing attribute includes a change in a distance to reach an address in the set of addresses.

Claim 8 (original): The method of claim 1, wherein said at least one routing attribute includes a change in a cost metric to reach an address in the set of addresses.

In re LIN ET AL., Application No. 10/733,016  
Amendment C

Claim 9 (currently amended): A method performed within a device for distributing routing information within the device, the method comprising:

receiving a first set of addresses from a first client indicating route updates of interest to the first client and a first set of types of routing changes that are of interest to the first client;

receiving a second set of addresses from a second client indicating route updates of interest to the second client and a second set of types of routing changes that are of interest to the second client;

maintaining one or more data structures including information corresponding to the first and the second sets of addresses and the first and the second sets of types of routing changes that are of interest;

receiving a particular route update;

performing one or more lookup operations on said one or more data structures to identify a result corresponding to the particular route update, the result identifying the first client but not the second client, and the particular route update corresponding to a particular type of routing change identified in the first set of types of routing changes that are of interest; and

notifying the first client but not the second client of the particular route update in response to the result identifying the first client but not the second client and the particular route update corresponds to a particular type of routing change identified in the first set of types of routing changes that are of interest;

wherein ~~the device includes~~ the first client and the second client are within the device.

Claim 10 (original): The method of claim 9, wherein said one or more data structures maintains a single set of types of routing changes that are of interest to the first and the second clients based on the first and the second sets of types of routing changes that are of interest.

In re LIN ET AL., Application No. 10/733,016  
Amendment C

Claim 11 (original): The method of claim 9, wherein said information maintained by said one or more data structures identifies different states of interest by clients, wherein said different states of interest include: whether the first client, the second client, both the first and second clients, and neither the first or second client are interested in a particular type of routing change.

Claim 12 (original): The method of claim 11, wherein a single indication of said different states of interest by clients is maintained for all of the addresses in the first and second sets of addresses.

Claim 13 (original): The method of claim 11, wherein an indication of said different states of interest by clients is maintained for each address of said first and second sets of addresses.

In re LIN ET AL., Application No. 10/733,016  
Amendment C

Claim 14 (currently amended): A method performed within a device for distributing routing information within the device, the method comprising:

maintaining a data structure of route dependencies including routes of interest to one or more clients;

receiving a routing update identifying a particular route;

identifying that no client of said one or more clients has subscribed to receive an update corresponding to the particular route;

identifying a second particular route dependent on the particular route;

identifying a particular client of said one or more clients has subscribed to receive an update corresponding to the second particular route; and

notifying the particular client of the update to the particular route in response to said identifying the particular client has subscribed to receive an update corresponding to the second particular route;

wherein ~~the device includes~~ said one or more clients are within the device.

Claim 15 (original): The method of claim 14, comprising identifying a change corresponding to the second particular route matches a types of routing changes that are of interest to the particular client; and wherein said notify the particular client is performed in response to said identifying the particular client has subscribed to receive an update corresponding to the second particular route and said identifying the change corresponding to the second particular route matches a types of routing changes that are of interest to the particular client.

In re LIN ET AL., Application No. 10/733,016  
Amendment C

Claim 16 (currently amended): An apparatus for distributing routing information within a device, the apparatus comprising:

means for receiving a set of addresses from a client indicating route updates of interest to the client and a set of types of routing changes that are of interest;

means for maintaining one or more data structures including information corresponding to the set of addresses and the set of types of routing changes that are of interest;

means for receiving a particular route update; and

means for notifying the client of the particular route update in response to identifying the particular route update corresponds to both at least one address in the set of addresses and at least one routing attribute in the set of types of routing changes that are of interest;

wherein ~~the apparatus includes~~ the client is within the apparatus.

Claim 17 (currently amended): A device ~~including logic encoded in one or more tangible media for execution and when executed operable to~~ comprising one or more processors and a memory, wherein the memory stores one or more instructions that, when executed by said one or more processors, perform the operations of:

receiving a set of addresses from a client indicating route updates of interest to the client and a set of types of routing changes that are of interest;

maintaining one or more data structures including information corresponding to the set of addresses and the set of types of routing changes that are of interest;

receiving a particular route update; and

notifying the client of the particular route update in response to identifying the particular route update corresponds to both at least one address in the set of addresses and at least one routing attribute in the set of types of routing changes that are of interest;

wherein ~~the device includes~~ the client is within the device.

In re LIN ET AL., Application No. 10/733,016  
Amendment C

Claim 18 (currently amended): A method performed within a router for distributing routing information within the router, the method comprising:

receiving a set of addresses from a client indicating route updates of interest to the client;

identifying at least one dependent route on which an address in the set of addresses is dependent;

maintaining one or more data structures including information corresponding to the set of addresses and said at least one dependent route;

receiving a particular route update corresponding to a particular route of said at least one dependent route; and

notifying the client of the particular route update in response to identifying the particular route update corresponds to the particular route of said at least one dependent route;

wherein ~~the router includes the client~~ the client is within the router.

Claim 19 (original): The method of claim 18, wherein said identifying the particular route update corresponds to the particular route of said at least one dependent route includes performing one or more lookup operations on said one or more data structures to identify one or more entries, wherein at least one of said one or more entries identifies that the client is interested in a change in said at least one dependent route.

In re LIN ET AL., Application No. 10/733,016  
Amendment C

Claim 20 (currently amended): A device ~~including logic encoded in one or more tangible media for execution and when executed operable to~~ comprising one or more processors and a memory, wherein the memory stores one or more instructions that, when executed by said one or more processors, perform the operations of:

receiving a set of addresses from a client indicating route updates of interest to the client;

identifying at least one dependent route on which an address in the set of addresses is dependent;

maintaining one or more data structures including information corresponding to the set of addresses and said at least one dependent route;

receiving a particular route update corresponding to a particular route of said at least one dependent route; and

notifying the client of the particular route update in response to identifying the particular route update corresponds to the particular route of said at least one dependent route;

wherein ~~the device includes~~ the client is within the device.

Claim 21 (previously presented): The device of claim 20, wherein said identifying the particular route update corresponds to the particular route of said at least one dependent route includes performing one or more lookup operations on said one or more data structures to identify one or more entries, wherein at least one of said one or more entries identifies that the client is interested in a change in said at least one dependent route.

In re LIN ET AL., Application No. 10/733,016  
Amendment C

Claim 22 (currently amended): An apparatus for distributing routing information within a device, the apparatus comprising:

means for receiving a set of addresses from a client indicating route updates of interest to the client;

means for identifying at least one dependent route on which an address in the set of addresses is dependent;

means for maintaining one or more data structures including information corresponding to the set of addresses and said at least one dependent route;

means for receiving a particular route update corresponding to a particular route of said at least one dependent route; and

means for notifying the client of the particular route update in response to identifying the particular route update corresponds to the particular route of said at least one dependent route;

wherein ~~the apparatus includes the client~~ is within the apparatus.

Claim 23 (original): The apparatus of claim 22, wherein said means for identifying the particular route update corresponds to the particular route of said at least one dependent route includes means for performing one or more lookup operations on said one or more data structures to identify one or more entries, wherein at least one of said one or more entries identifies that the client is interested in a change in said at least one dependent route.
